

Consumer Trends: Technomic Says Snack Consumption Is Rising

CHICAGO (PRNewswire) — Snack consumption is on the rise, as half of today's consumers (51 percent) say that they eat snacks at least twice a day, an increase from the 48 percent who said the same in 2012. And about a third of consumers (31 percent) told Technomic they're snacking more frequently than they were just two years ago.

Not only are consumers snacking more often, they're broadening their definition of a "snack." These days, a wider range of foods—and beverages—are now viewed as snacks, and convenience stores and other retailers are sparking competition with restaurants in order to meet the growing demand.

"Snacking occasions represent a growth channel for restaurant operators," said Darren Tristano, Executive Vice President of Technomic, Inc. "The retail market is aggressively promoting snacks, but there's plenty of room for restaurants to expand their snack programs and grab share. By providing more innovative, healthy and easily portable snacks, and boosting variety, restaurants can position themselves to increase incremental traffic and sales—particularly among a younger customer base."

Spotlight on Snacks

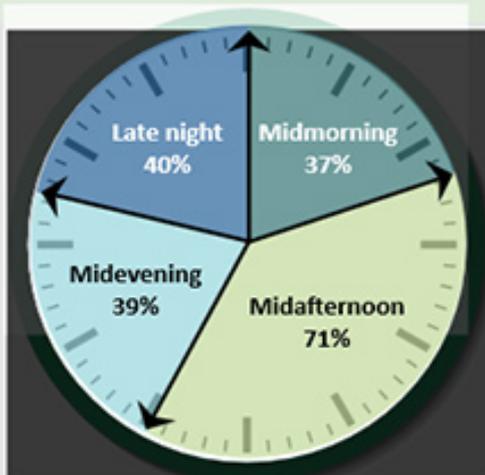

51%

of today's consumers say they snack **at least twice a day**, up from 48% in 2012.

Base: 1,500 (2012, 2014) consumers aged 18+
