brewery supports another 45 jobs outside. From farmers to factory workers, and truck drivers to tavern owners, beer puts people to work.

"Today we toast to the industry's 2 million men and women who make it possible for Americans to enjoy their favorite beer," said Jim McGreevy, Beer Institute President and CEO. "America's [preference for beer](#) [2] is a huge boon to the national economy and the American worker."

According to an [economic study](#) [3] jointly commissioned by the [Beer Institute](#) [4] and the National Beer Wholesalers Association in 2012, U.S. brewers and beer importers are the foundation for an industry that employs more than 2 million Americans, directly and indirectly. Beer also contributed \$246.6 billion to America's economy and generated \$49 billion in local, state and federal taxes.

A Beer Institute [analysis](#) [5] showed that each job in a brewery supports other jobs in the agriculture, business and personal services, construction, finance insurance and real estate, manufacturing, retail, transportation and communication, travel and entertainment and wholesale sectors.

However, more than 40 percent of what consumers pay for a beer goes to taxes. Currently pending in Congress, the bi-partisan Brewers Excise and Economic Relief (BEER) Act of 2013 would significantly reduce the federal excise tax on beer drinkers. Specifically, the BEER Act would roll back the federal excise tax from \$18 for every 31-gallon barrel to \$9 a barrel. For brewers producing less than two million barrels annually, the rate would be reduced to \$3.50 on the first 60,000 barrels; and for those brewing less than 15,000 barrels, the federal excise tax would be eliminated.

"Most consumers are surprised to learn that, on a national average, taxes are the most expensive ingredient in their beer," said McGreevy. "The BEER Act would protect consumers from a hidden and outdated tax and encourage expansion and growth in an American industry that puts millions of men and women to work."
