

Explosion-Proof Heaters and Controllers

Lindsey Jahn, Associate Editor

Company has requalified a broad range of its explosion-proof heaters and controllers, and at the same time has validated their suitability for use in extremely cold environments. All ATEX and IECEx heaters and controllers are certified as complying with the latest editions of the relevant parts of the IEC/EN 60079 safety standard for electrical equipment in explosive atmospheres. The heaters include a variety of ATEX and IECEx compliant models, with individual power ratings from 25 to 600 watts and a choice of temperature classes. There are different models to cover the principal application areas of freeze protection, condensation protection and temperature maintenance, with a choice of convection or conduction heaters in each category.
