

# Mixers and Grinders

Lindsey Jahn, Associate Editor

Weiler's Dominator® series of heavy-duty grinders and mixer/grinders delivers superior performance and the highest quality product possible. Featuring robust construction and durability, the equipment is balanced and efficient. The series is designed for a maximum return on investment and a lower cost of ownership. Its Balanced Flow™ design allows for balanced and efficient product flow by matching the volume of raw material brought to the plate with the amount of raw material passing through the plate. As a result, less pressure is generated in the head section, and raw material is protected against roll back. The series effectively removes hard tissue, allowing for more hard tissue mass to be collected and removed and greatly reducing hard tissue in the end product.
