

Mobile Light Tower

Lindsey Jahn, Associate Editor

The WCDE-4-4X300W-LED mobile light tower is a self-contained towable light tower package that produces enough light to illuminate an area up to 6 acres in size. This unit contains a water cooled diesel engine powering a 6,000 watt generator, which supplies the current to four 300 watt LED lamps producing 29,580 lumens each for a combined total of 118,320 lumens of light. This unit can run uninterrupted for 60 hours straight without refueling, and includes a telescoping light mast that can elevate the four LED lamps to a height of 30 ft. This package is designed for industrial operations and anywhere an extended operation capable mobile lighting solution is needed.
