

Shielded Signal Cables

Lindsey Jahn, Associate Editor

Hi-Flex Shielded Signal Cables feature a compact, flame retardant cable design free of contaminants and halogens. It is engineered to provide uninterrupted data transmission reliability, space efficiency and consistent electrical characteristics. They are available in 1, 2 and 3 twisted shielded pairs (28 AWG to 18 AWG) and are designed for use in sensor, encoder, actuator and resolver connection applications. In addition, an overall shielded 28 AWG/5 twisted pair round version is available. Unlike bulky round data transmission cables, this flat version is designed for repeatable motion, tight routing, reduced skewing effects and better heat dissipation.
