

Trigger-Controlled Water Nozzles

Lindsey Jahn, Associate Editor

Sani-Lav® nozzles are designed to withstand the harshest working conditions and are suited for use in the food and beverage processing industry. All models have a trigger-controlled, variable spray pattern and instantly shut off when the trigger is released. These nozzles feature Garden Hose Threat (GHT) inlets and can connect directly to a hose or swivel adapter. They are available in many colors and sizes, including the N81 water-saver model that uses 40 percent less water.
