

# Volumetric LED Panels

Lindsey Jahn, Associate Editor

ArcMAX™ Volumetric LED Panels have been added to the DesignLights Consortium® (DLC) Qualified Products List (QPL), certifying the fixtures for national utility rebates. These fixtures are designed for installation in T-bar grid or drop-in ceilings. Units deliver optimal color rendering and consistent lighting distribution in a broad array of commercial applications, including offices, showrooms and corporate campuses. Designed as energy-efficient replacements for 64- to 96-watt fluorescent fixtures, the product is offered in 42-watt 1'x4' and 2'x2' models and a 55-watt 2'x4' panel. Available in 3500K, 4100K and 5000K correlated color temperatures (CCTs), the 0-10 volt dimmable series delivers low intensity, reformative optic technology to evenly disperse light output, reduce glare and deter pixelation patterns.
