

Carousel Filling Machine

Lindsey Jahn, Associate Editor

The KF 2/4 carousel filling machine is designed for the aseptic or ultra-clean filling and closing of bottles and cups. The machine fills liquid products, including those with higher viscosity, fibers and particles like fruit yogurts, milk drinks, teas, coffees, protein drinks, baby food and clinical nutrition products. Capable of handling cup and bottle sizes from 100 to 1,000 mL, the machine can reach speeds of up to 10,000 bottles per hour for 200 mL bottles. The system offers greater flexibility compared to linear filling machines, as it enables quicker changeovers between formats and pack styles, such as bottles and cups, in a variety of sizes.
