

Case Packer

Lindsey Jahn, Associate Editor

Packagers who need to run multiple package sizes and pack patterns for a variety of retailers can reduce downtime for case packer changeover with Company's Model 206 case packer. This unit offers top flexibility to pack many styles of cartons, cans and semi-rigid containers, single or multipacks, into RSC, HSC, HSC display cases or trays. Changeover is accomplished easily at the operator console. Simply select the new product case/tray size from the pre-programmed options and the motorized changeover is activated, ensuring automatic, repeatable adjustment to the new specifications. For extreme product size changes where change parts are required, modules with locking handles are used to ensure simple, no-tools changeover. This system packs up to 30 cases per minute, depending on the product and pack pattern.
