

Compostable Barrier Wrap

Lindsey Jahn, Associate Editor

Advantage Barrier Wrap has received compostability certification and is suited for various food wrap applications in direct contact with warm food products, such as hamburgers and sandwiches. The wrap offers a moisture and water vapor barrier on the paper. ISEGA has stated that the wrap meets the requirements for packaging material recoverable through composting and biodegradation, according to EN 13432 standard. This product now meets all of the most demanding criteria for green manufacturing, covering the entire lifecycle of the product. It is from a renewable raw material, recyclable, repulpable and disposable via composting together with normal household waste when desired.
