

Filler Spout

Lindsey Jahn, Associate Editor

Company's patented MSBO spout allows for clean deposits of difficult-to-handle products like meat, fish, poultry and vegetables. Product runs unburnable products that previously could not be cleanly cut off. Design features include:

- Positive Shut off
- Unique cutting spool
- Circumferential air blow off
- Cutting spool blow off
- PLC controlled multiple cycling of cutting spool
- Quick tool free disassembly of contact parts
- Heavy duty design

Product can be added to new or existing filling machines. Spout is ideal for use over tray lines, horizontal vacuum formers and entrée lines that run a wide variety of savory products where a clean cut off is required to maintain a clean seal zone.
