

# High-Speed Linear Control Actuator

Lindsey Jahn, Associate Editor

AEL6 series smart high-speed linear actuator is ideal to control steam and other industrial fluids without the need for compressed air. For applications that require fast response from control valves and a high thrust fail-safe function. Product meets the fast response and fail-safe requirements of typical steam heat exchanger applications within the institutional market. Product benefits include:

- Reduced lifetime cost due to low energy consumption.
- Reduced carbon emissions.
- Reduced plant downtime, through quick, easy installation and commissioning.
- Ability to develop preventative maintenance schedules.
