

Open Metal Conveyor Belting

Lindsey Jahn, Associate Editor

DURAFLEX® EDGE open metal conveyor belting for poultry and food manufacturers has a patent-pending, durable clinched-edge design. The flex-style belt reduces breakage and damage while nearly eliminating all potential for metal hits and product contamination. Patent-pending 'EDGE' technology bends with a true hinge in both directions, eliminating friction and metal fatigue and ensuring proper tracking. Thirty-second splicing time reduces maintenance and replacement time. The open metal belt does not compromise belt strength and handles heavier loads than typical light-duty conveyor belts. Product is easy-to-clean with increased carrying capacity and tighter transfer capability. Handles heavier loads than typical light-duty conveyor belts.
