

Chamber Belt Machine

Lindsey Jahn, Associate Editor

The B 210 chamber belt machine is available in a variety of versions and configurations. It is individually adaptable to the respective needs of the user and suitable for packaging a wide range of products. The machine is equipped with an electric chamber lide mechanism and an automatic transport conveyor in the chamber for conveying products out. This provides a compact and affordable solution for automatic packaging in film pouches that only requires a small footprint. Through the attachment of the sealing bars in L-form (on the front and on the right and left side), the unit guarantees high product output. The machine can be equipped with a product infeed conveyor, so it can also be used like a standard chamber belt machine.
