

## High Speed VFFS Machine

Lindsey Jahn, Associate Editor

The tna robag® FX 3ci high speed VFFS packaging machine is available in multiple configurations. The 3ci RDJ 230 is designed for powder applications, such as coffee, sugar and flours. A second configuration, 3ci RTJ 180 features the tna intelli-weigh® 0314 omega multi-head scale, a tna hyper-detect® metal detector and a labeler. The high speed system offers throughput rates of 150-180 bpm on snack foods, making it suitable for high volume packaging.
