

Hydrostatic Precipitator

Lindsey Jahn, Associate Editor

The Type LVN RotoClone Hydrostatic Precipitator is a completely self-contained device that cleans the air by centrifugal force and intermixing of water and dust laden air. Capable of handling ventilation and pollution control of dust emitting machines that require air volumes under 2,500 CFM, the system is suited for a variety of food processing and handling applications. Product features include:

- Stainless steel construction with automatic water level control and motor starter push button as standard features
- Enhanced fan wheel with 25% more air being used
- Shorter lead time
