

Hygienic Liquid Sachet Packaging

Lindsey Jahn, Associate Editor

The Sigpack RN vertical sachet machine features new liquid dosing capabilities. It is designed for packaging four-side-seal sachets for the food industry. Designed to handle a wide range of packaging materials, the machine ensures hermetic sealing with high efficiency. It is capable of producing 1,000 packs per minute with high filling accuracy on up to eight lanes. The system occupies a smaller footprint and reduces maintenance. The standard machine features the clean-out-of-place (COP) function, with its parts designed for easy disassembly and cleaning. An optional clean-in-place (CIP) function allows automatic and simplified washdown without machine disassembly. Both functions ensure thorough sanitation of product-contact parts.
