

Tapered Fittings for Surge Bins, Hoppers

Lindsey Jahn, Associate Editor

Tapered BFM® fittings for surge bins and hoppers provide quick visual confirmation of product flow and volume. They provide an interface between production and packaging in dry, sanitary processes. The design is USDA accepted and 3A certified. Product works with vibrating, oscillating and gyratory equipment. If an over-pressure incident occurs, fittings seal tighter than old-school hose clamps, providing an extra level of safety for personnel and the facility. Fittings snap-in-place quickly without tools. They can be cleaned in place or removed for cleaning. Custom connections are available. Applications include dairy, food and baking industries that handle cereal, grain, sugar, rice, proteins, whey and other products.
