

Case Erectors and Sealers for Ultra-Small Cases

Lindsey Jahn, Associate Editor

Both the CE50 Case Erector and CS50 Case Sealer are now equipped to handle RSC cases as small as 5" L x 3.5" W x 3.5" H. The new models retain the footprint of the originals. All major motions continue to be servo driven, allowing "on-the-fly" speed adjustments and increases in overall equipment reliability over the use of traditional pneumatic controls. The entire family of systems offers quick, tool-free changeover features with easy-to-read scales and HMI instructions. The Allen-Bradley PanelView 600 HMI with a user-optimized graphic interface supports efficient operation and trouble-shooting for a wide range of operator skill levels.
