

Magnetically Mounted LED Light

Lindsey Jahn, Associate Editor

The LEDWP-600E-M magnetically mounted LED wall pack light features a glare-free shield. This 60 watt LED light offers high light output from a compact form factor and is designed to provide a more durable and long-lived alternative to halogen and metal halide units. The light produces a wide flood beam without the high heat, fragile construction or high energy costs of incandescent lighting. The assembly consists of 45 LEDs paired with high purity optics to produce a wide light distribution overpowering that of a 500 watt quartz flood light. The unit is constructed of three angled boards that help provide a wider spread. Instead of the light shining forward, the center board is concentrated to go straight out while the boards on the side are 45° offset
