

Slurry Mixing and Application System

Lindsey Jahn, Associate Editor

The tna intelli-flav® CLS 3 closed-loop slurry (CLS) seasoning system for the snacking industry enhances the homogeneity of the slurry mix. Its unique spraying technology and control ensures consistency of application to the snacks. The automated design of the system, including dry seasoning, oil and other ingredients, reduces the need for dedicated labor and simplifies the production line. The system meters the ingredients to a specified recipe, mixes it using an under-surface mixing head within a double-jacketed, heat-controlled tank and then applies the slurry to the products via specially designed spray guns.
