

Smartwatch Warehouse Control System

Lindsey Jahn, Associate Editor

The Shiraz Warehouse Control System now works on a smartwatch. Based on the Pebble smartwatch, the system allows warehouse managers to gather critical key performance indicators to better manage their distribution and fulfillment operations from their wrist. With real-time visibility into warehouse operations 24/7, managers can better meet the demanding requirements of today's modern distribution operations. Executives are able to look at important KPIs to ensure customer orders and service levels can be met, to monitor inventory levels and to supervise operational performance. Managers can also receive emails, voicemails, text messages and notifications, providing them with visibility into what is happening within their distribution operations.
