

# Vertical Lift Module

Lindsey Jahn, Associate Editor

The Shuttle XP 1000 Vertical Lift Module (VLM) features an overhead crane mounted on the unit for easy handling of heavy goods. In addition to crane handling, pallets can also be stored within the system. The integrated crane handling, pallet storage and retrieval capabilities leads to improved efficiency and ergonomics, as well as space savings during production and maintenance. This system meets the specific requirements of various industries. The integrated crane, unlike a hall crane, is permanently available. Parts can be securely stored and retrieved at an ergonomic height.
