

Warehouse Management System

Lindsey Jahn, Associate Editor

The AccellosOne Warehouse Management System (WMS) version 6.5 is built on Company's unifying technology platform, the AccellosOne Platform version 3.0. This cloud-ready system boasts a new configuration mechanism that leverages Microsoft's Workflow Foundation, enabling partners and customers to analyze and modify business processes without writing code or using proprietary scripting languages. Other product features include:

- Advanced Workflow Engine - Workflows enable the user to customize the functionality of the WMS and the handheld without writing code or using proprietary scripting languages.
- Advanced Event Engine - Leverages the system to generate emails and information on behalf of your employees.
- Subject Workcenters - New Workcenters designed to simplify research related to customer, vendor and products.
