

Mixers with HMI and SCADA Packages

Lindsey Jahn, Associate Editor

Company's mixers now are offered with HMI and SCADA Packages for data entry and recipe selection from a color touchscreen. The PLC Control Panel supplied for full mixing, heating and vacuum control maximizes a machine's overall productivity by significantly improving batch-to-batch consistency and reducing operator errors while accelerating product changeovers. It also enables automatic data logging into a CSV or Excel file format with time and date stamp. Two hundred-gallon Double Planetary Mixers are equipped with High Viscosity (HV) Blades. The mixer's robust processing capability is greatly enhanced with the use of recipe controls which transforms the entire mixing/discharge/cleaning cycle into an automated, simplified process with a very high degree of repeatability.
