

## Bulk Bag Discharger

**PATENTED** Company features bulk bag discharging system that can be configured to accept bulk bags loaded via integral hoist system, customer supplied hoist or forklift. Integral hoist systems typically include a heavy-duty electric motorized hoist and trolley and a bag lifting frame for safe bag loading. The bag-lifting frame features continuously welded carbon steel pipe with heavy plate steel support gussets, safety strap stops and a low profile design for reduced headroom. Product offers the ultra-low headroom bag lifting frame for use in low clearance applications. Electronically driven explosion-proof hoists, intrinsically safe air driven hoists, and low headroom hoists are available to meet your application requirements. Hoist systems typically include a power junction box, pendant junction box, quick connect pendant and a nylon energy chain system for protection of moving cables.
