

Bulk Bag Discharging System

Half-frame bulk bag discharging system is a custom designed unit featuring a stainless steel massaging system to promote product discharge. Low headroom lifting frame with debris pan is included. Unit includes a fully integrated sanitary stainless steel discharge hopper with a quick release domed cover and pneumatic vibrator. Product features easy equipment cleaning, including a main frame with no tube penetrations. Equipment includes a NEMA 4X operator control panel with low level indicator stack light. The product is custom designed for your specific application requirements.
