

Cleaning Brushes

New cleaning brushes are designed for efficiency and functionality in food production, retail and municipal environments. Users will notice quite a few differences with the new brush concept that combines hygiene and efficiency with good looks. The smooth dynamic profile and multifunctional grip points aid handling and application by offering a more comfortable and efficient grip. The non-symmetrical head includes shorter and stiffer filaments to deliver a scrubbing action and longer angled filaments to reach into corners. Key features with regard to the improvements in hygiene offered by the new brush range are the angled and faceted design that minimizes flat surfaces where liquids can lie and minimizes dirt traps. The redesigned hanging hole provides better access to cleaning and encourages the tool to be placed on a hook for storage.
