HMI Panels

These rugged IP65-rated touchscreen HMI panels feature a single-surface screen with widescreen format, an aluminum chassis housing, and premium configuration and screen building software as standard features. In addition, all models provide Ethernet and are programed with a visualization builder graphical tool. Product features display and input capabilities ideally suited for use in a wide range of packaging and food processing. The panels use a 16:9 format and provides up to 30 percent more usable screen area than other generations. The graphical tool is a modern programming tool supports Windows Presentation Foundation objects, and the objects used to build up screens are vector-based so they can be scaled and maintain clear edges. Variables are automatically mapped from the PLC to the HMI so programming is simplified.
