

## Hygienic Zone Planner App

Company has designed an iPad-based app to manage color-coded cleaning tools used in your factory. The hygienic zone app delivers a visual picture of your factory divided into distinct zones. By populating this new app with your specific requirements during a site visit, the company can quickly prepare a plan for color-coding in your factory, which shows where the tools and their coordinating wall brackets are located within each zone. It also automatically generates a list of cleaning tools that are to be found on each wall bracket. Color coding is an effective way to reduce the risk of transferring microorganisms or allergens between production areas through cleaning tools. It can help you to ensure product safety and have confidence in your hygienic standards.
