

Packaging Film

This clear packaging film is environment-conscious, high-oxygen and a moisture barrier. Product is designed for use as the inside sealant web for the packaging of bakery items, salty snacks, cookies, crackers, granola, fruit and nut mixes and confections. Consumer packaged goods companies and converters can create transparent PVdC-free laminations that provide an oxygen and moisture barrier, helping keep foods fresh. Film is heat-sealable and offers end users an alternative to coated OPP and PET films. Product is available in 70 and 80 gauge, and presents a downgauged alternative to thicker films. Film can also be used as an unsupported web for flexographic and rotogravure surface printing. Product also provides oil and puncture resistance and stiffness. Film runs on HFFS and VFFS equipment.
