

## Pink Color-Coded Products

Company has introduced pink to its collection of color-coded products for material handling, janitorial, safety, lab and processing applications. Color-coding tools, to assure that they are used in the areas in which they are meant to be used, has helped stop bacterial migration between areas of the plant and different applications. New pink items for material handling are pails, shovels, scoops and scrapers. For janitorial and maintenance functions, squeegees, brushes, brooms, dust pans, signs and handles have been added. the color line includes several other colors as well, including white, red, yellow, blue, green, gray, brown, black, orange, purple and now pink. The company features the complete color-coded line on their website.
