

Rotary Chamber Machine

Rotary chamber machine features a 304L stainless steel modular frame with the ability to accept a multitude of chamber configurations (widths and lengths) and sealing profiles (single, double or custom seal impressions) and sealing widths up to 24 inches long. Product's patented constant temperature sealing system allows for the capability of sealing through the thickest bags, through contaminants, and through excessive folds and wrinkles. Using a micro-processor control and a 10 inch touch screen display, the product offers operation with pre-set storage capabilities. It provides control over sealing temperature, sealing time and pneumatic control over sealing pressure. Product features include:

- Made in America by an American company
- In most cases, same day shipping for on-shelf items (typical wear items)
- Fast turn-around on machined components (programmed & machined in-house)
- Average machine speeds: thirty cycles per minute (30 CPM)
- Sealing widths from 12" wide to 24" wide
- Sealing profile: single, double, custom seal impression
