

Plastic Display Pallets

New plastic display pallets allow marketers an easy and attractive transport-to-floor solution for in-aisle or end-of-sale displays. These all-plastic modular display pallets are available in 24" x 24", 24" x 48" and 48" x 48" footprints to accommodate a wide range of POP displays and structures. Featuring a flat, smooth surface, the all-plastic display pallets allow for easy set up in a warehouse or co-packing facility. Once they are transported to the retailer, they can be moved directly to the sales floor; ultimately providing an incredible convenience that reduced labor costs and maximizes storage space. In addition, the ability to move from truck to the retail floor seamlessly reduces packaging waste by eliminating excessive wood pallet disposal. Complete with contoured corners, the pallets won't damage product loads and are shopper-friendly. Made from durable non-porous plastic, they provide efficient material handling that can withstand the constant stressors of a retail environment. Their heavy duty, solid body construction accommodates a variety of load sizes and weights, and come in a variety of footprints to be utilized in a wide range of POP displays and structures.
