

Vertical Z-Style Conveyor

The company introduces a vertical z-style conveyor. The DynaClean conveyor reduces the cost of ownership by offering a design that is much easier to clean than bucket conveyors. The product is an ideal solution for food processing facilities who have a need to move product to higher elevations. The z configuration is just one of many configurations made possible with the food conveyor line manufactured by the company. The patent pending DynaClean line of conveyor systems are designed for ease of cleaning and sanitizing, which results in shorter downtimes and a lower cost of ownership than standard bucket elevators. The vertical Z is custom designed to your desired height and includes widths up to 24 inches. A variety of belt styles, including sold-surface ThermoDrive and plastic link style belting, are compatible with the conveyor. Drive flight options include standard, 75 degree and scoop flights, which are selected based on product and desired throughput. The conveyors will accept product from a vibratory feeder or the company offers the option for stand-alone or attached hoppers for bulk product feeding.
