

# Cookie Dough Depositor

Kari Imberg, Associate Editor, Food Manufacturing

Cookie dough depositing systems produce everything from individual, preformed cookie dough portions to tubs of bulk dough. The depositor features a powerful, positive displacement double-screw pump that provides the highest levels of portioning accuracy. The double-screw transports product extremely gently and without smearing. Large inclusions are not damaged or crushed. Cookie Dough Depositor with a Guillotine Cutoff attachment is an ideal solution for producing pre-formed, ready-to-bake frozen cookie dough portions and breakaway cookies. The Guillotine Cutoff is a shape forming and cutting attachment that connects to the Vemag Depositor to produce exact-weight formed portions. The Guillotine attachment features an interchangeable die insert that allows bakers to quickly and easily change product shapes and sizes. Depositing precise and consistent portions onto moving lines is easily accomplished. The depositor with a Dripless Valve attachment is ideal for filling cups, tubs and bulk containers with cookie dough. The Reiser-engineered Dripless Valve is a filling head that connects to the Vemag Depositor. The Dripless Valve accurately fills containers without mess or contamination.
