

## Hydraulic Drum Dumper

System safely inverts drums, then empties the materials into an existing process. MTS hydraulic Lift & Seal System™ docks drum to a gasketed pour cone for dust-tight operation, and a clean working environment. Pour cone features a manual butterfly valve, discharge nozzle, and vibrator mounting channel. A patented Control Link™ Rotation System provides controlled 180° drum rotation for maximum product discharge. All product contact surfaces are type 304 stainless steel. Systems are custom designed to meet your application requirements.
