

## Pressure/Gravity Filling Machine

This hygienic pressure/gravity filling machine is used for food applications including sauces, syrups, edible oils, and other viscous foods with speeds up to 300 bottles per minute. Unlike other pressure/gravity filling machines, this new offering utilizes a sanitary overflow bowl that captures any product overflow so that it can be used without reprocessing, which reduces waste, time, and energy. This new machine also fills non-viscous food products for greater flexibility – two machines in one.
