

Perforators

Kari Imberg, Associate Editor, Food Manufacturing

A manufacturer of food forming machines and portioning depositors offers several different options and accessories that are designed to enhance the shape and taste of finished products. Some of these options include a wide variety of perforators and scoring devices. Available in several widths to match existing forming equipment, the company's perforators and scoring devices offer a variety of configurations to meet processor needs. "Top Only" configurations as well as "Top & Bottom" configurations can be specified for perforating and scoring. "Tip-To-Tip" and "Tip-To-Gap" configurations are also available. Company also offers perforators that maximize the thermal transfer characteristics of products. This provides processors with easier, more efficient freezing and/or cooking, while enhancing the finished shapes of products to give just the right "Look & Cook" customers require.
