PRODUCT VIDEO: Vacuum Packaging Machine

HollymaticCorp

If a picture is worth a thousand words, this video on the rotary chamber vacuum packaging machine speaks volumes. Product features a 304L stainless steel modular frame with the ability to accept a multitude of chamber configurations (widths and lengths) and sealing profiles (single, double or custom seal impressions) and sealing widths up to 24" long. This flexibility is ideal for plants with wide product diversity and quick product changeover needs. The RC-300's patented constant temperature sealing system allows for the capability of sealing through the thickest bags, through contaminants, and through excessive folds and wrinkles.
