

Silicone Hose

The Silbrade silicone hose offers a combination of performance properties for fluid transfer applications. Typical uses include chemical feed, bottle filling, deionized water transfer, food handling, beverage service, viscous material handling, laboratory, resin feeds and adhesive lines. It is also used as protective jacketing. The hose is reinforced for higher pressure applications and resistant to temperature variations. Its construction $\#151$; open mesh polyester braiding incorporated within walls of silicone tubing $\#151$; enables its use in pressure applications that unreinforced tubing often cannot handle. The hose handles steady or fluctuating temperatures between $\#150$;80°F and 350°F.
