Reliance HDP Bag Placer

The Reliance HDP Bag Placer eliminates the time and costs associated with manually hanging bags on a bagging scale. The product uses a horizontal bag conveyor that handles gusseted bags with gussets up to 6 in. and flat bags from 23 to 40 in. in length that can be on either the left or right of the system depending on layout requirements. The empty bag conveyor allows an operator to add additional bags while the system is still in operation. The compact design can allow 36 in. filled bags to be filled with a clamp assembly meeting the bagging scale's fill chute at a height of 74 in. above the floor.
