

Solid Belt Freezing System

Published on Food Manufacturing (<http://www.foodmanufacturing.com>)

Solid Belt Freezing System

The ColdFront™ solid belt freezing system integrates a solid, stainless steel conveyor belt with a high-efficiency cryogen delivery system in a space-saving tunnel design to allow processing of a variety of food products not ideally suited for traditional belt conveyor systems. The system quickly freezes the underside of the product without creating marks or losing liquids while ensuring the shape of product is maintained. The unit meets the new USDA sanitation standards (NSF/ANSI/3-A 14159-3).
