

Can Palletizer Safety Information

Company's new brochure, Can Palletizer Safety and Productivity, provides an overview of the palletizer process, guarding challenges and hazard analysis, and highlights Company's concept of the future of can palletizer safety, rooted in the G9SP Stand-alone Safety Controller. The controller ties Company's system together, eliminates the need for multiple safety relays, and connects to PLC and motion controllers. For companies from which can palletizers require operator interaction with each cycle, who rely on human behavior to protect operators and whose productivity is or would be hindered by traditional safeguards such as fencing and light curtains, this brochure illustrates how simplified safety control, achieved through best in class components, can improve safety and profitability. The brochure can be downloaded in PDF format at <http://www.sti.com/applications/index.htm>.
