

## Food-Grade Hoses

High Temperature Food Processing hoses are compliant with FDA, 3A and USDA product standards and offer a seamless fluoropolymer tube that resists the collection of bacteria, preserves taste and is easy to clean. For added strength and durability, each hose has added reinforcement that withstands internal pressures and full vacuum capabilities within temperature parameters. Units with stainless steel braid reinforcement are available with a silicone jacket for handling protection. Easy-clean units with other abrasion resistant covers are available by request. PAGE-flex SBF™ offers smoothbore with a superior bend radius (half the bend radius of conventional fluoropolymer braided hoses) coupled with superior kink and vacuum resistance. PAGE Flare-Seal™ Hose assemblies feature a PTFE liner that passes through the inside of the fitting and is then flared over the face to provide 100% full PTFE coverage on all wetted surfaces. FEP smoothbore EPDM rubber covered hose is a flexible hose with increased personal handling safety. Sizes range from 3/8" I.D. up to 4" I.D. depending on style.
