

## Safety Module

Food Manufacturing Staff

The G10 is the world's smallest AS-Interface safety module with IP67 protection. Applying a strict "less is better" design philosophy, these modules reduce the complexity and cost of any safety installation. Additionally, the design supports high modularity enabling OEMs to transform any conventional safety device into an AS-Interface networking solution, thus further reducing inventory requirements and simplifying machine designs. The ultra-compact modules feature a single-piece design that delivers unobtrusive simplicity and superior long-term reliability when compared with complex multi-part designs. With innovative Connect & Done technology, the 40 mm x 27 mm x 22mm housing can be placed directly inside a cable tray, eliminating mounting requirements in many applications.
