

Stainless Steel Power Pusher

The stainless steel pedestrian-operated, battery-operated Power Pusher is ideal for moving heavy rolling loads in the food industry. The unit is significantly less expensive than a forklift, and operators do not need a license. It comes with a builtin battery charger that plugs into a standard outlet. With a footprint less than two square yards, the unit is easily stored at a jobsite and is easy to transport from site to site. One person can use the unit to efficiently and safely push, pull and maneuver wheeled loads up to 150,000 lbs. Non-stainless steel construction models are also available. Accessories and attachments include:

- Hitches
- Tow bars
- Strobe
- Motion beeper
- Push plates
