

Sugar & Egg-Wash Alternative

Food Manufacturing Staff

Add-Here CSA is designed for bakers, snack makers and other food manufacturers looking for alternatives to sugar and "egg-wash." The proprietary blend of gums is developed to stick spices, salt, seeds and other topicals onto a variety of products. The ingredient has low viscosity in solution, so it can easily be sprayed onto bagels, pretzels, crackers and other applications where sticking spices or other topicals are preferred. With its binding and film-forming characteristics, the ingredient can hold more salt, spices, seeds or other toppings without the addition of sugar, honey, egg wash or high fructose corn syrup. The ingredient can also seal burritos and other closed meat or fruit-filled pockets.
