

Capping And Lidding Parts

Food Manufacturing Staff

Company produces tightening discs, gripper rubbers, quills, quill discs and other contact parts to fit virtually any brand of capping and lidding equipment. Long-wearing polyurethane applies consistent torque to eliminate scuffing or burning of caps, while other materials are available to suit nearly any application. Standard designs are available for many types and sizes of equipment used to apply lug or screw caps, shaker tops, fitments, child-proof closures, over caps, double snap caps, trigger sprayers, large size caps and more. Company can produce any style or design from supplied drawings or reverse-engineer the product from supplied samples.
